The global GPS-GNSS Anti-jammer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

GPS-GNSS anti-jammer, also known as a GPS jamming or GNSS (Global Navigation Satellite System) jamming countermeasure device, is a technology or system designed to detect and mitigate the effects of GPS or GNSS signal interference caused by jammers. GPS and GNSS jammers are electronic devices that transmit signals on the same frequencies as satellite navigation systems to disrupt or block the reception of satellite signals by GPS and GNSS receivers. This interference can affect the accuracy and reliability of navigation, positioning, and timing information, which is critical for various applications, including transportation, agriculture, surveying, and defense.

The market saw a rise in the development and deployment of GPS-GNSS anti-jamming solutions to protect critical infrastructure, military applications, and commercial operations that rely on accurate GNSS data.
