GPS Low Noise Amplifier is the key module of GPS front end. Low-noise amplifiers basically perform a variety of operations, such as weak signal amplification, noise reduction, gain increase, stability improvement, noise reduction and channel interference elimination. Using a low noise amplifier in the RF front end of the receiver is the best way to reduce noise while ensuring system efficiency and data accuracy. In every RF receiver system, a low noise amplifier can be used to improve the signal-to-noise ratio.
