The global Graded Index Fiber market size is predicted to grow from US\$ 696 million in 2025 to US\$ 1261 million in 2032; it is expected to grow at a CAGR of 9.0% from 2026 to 2032.

Graded-index fiber is a type of optical fiber in which the refractive index of the core decreases continuously with increasing radial distance from the optical axis of the fiber, as opposed to step-index fiber, which has a uniform refractive index in the core and a lower refractive index in the surrounding cladding. Because the portion of the core near the fiber axis has a higher refractive index than the portion near the cladding, light propagates along a sinusoidal path in the fiber. The most common refractive index profile for graded-index fiber is very close to a parabola. The parabolic profile causes the light to continuously refocus in the core and minimizes modal dispersion.

United States market for Graded Index Fiber is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Graded Index Fiber is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
