A grain steel silo is a modern storage facility constructed from galvanized or color-coated steel sheets through processes like spiral bending, bolted assembly, or welding, designed for the safe storage of various bulk grains (e.g., wheat, corn, rice, soybeans). Its core characteristics include modular and standardized design, enabling rapid construction, excellent sealing, a high degree of mechanization for handling, and the capability to be equipped with intelligent systems for aeration, temperature monitoring, and fumigation. This effectively ensures the stable quality of grain during long-term storage, preventing mold and insect infestation. It is the mainstream storage solution for modern grain reserve depots, port terminals, and processing plants. The single line production capacity of grain steel silo is about 300 sets, and the industry gross profit margin is about 25% -40%.
