Polyphenols are a heterogeneous set of molecules found in various plants and fruits. The grape and its derivatives have a high content of these polyphenolic compounds. Phenolic grape compounds include, among others, phenolic acids and flavonoids (catechins, proanthocyanidins) and stilbenes (resveratrol). The highest concentration of polyphenols is found in the grape seed and in the skin of the grape. These grape compounds harbor a great antioxidant power (high ORAC value) and have multiple health benefits, applicable in food, nutraceutical products and animal nutrition. Part of the biological activity of polyphenols resides in their ability to be part of the cellular antioxidant system in humans, which makes them perfect natural antioxidants.
