The global Graphene Additives for Polymer Composites market size is predicted to grow from US\$ 55.03 million in 2025 to US\$ 259 million in 2032; it is expected to grow at a CAGR of 24.9% from 2026 to 2032.

In 2025, global sales volume of Graphene Additives for Polymer Composites was approximately 750 tons, with an average selling price of about USD 75/kg. The gross margin of major manufacturers was generally in the range of 35% to 55%.

Graphene Additives for Polymer Composites are modified additives developed for polymer systems such as plastics, rubber, resin-based composites, coatings and adhesives, with graphene as the core functional component. Common product forms include powder, slurry and masterbatch. These additives are typically produced through graphene exfoliation, surface modification, dispersion treatment, masterbatching or slurry preparation, improving the dispersion stability and interfacial compatibility of graphene sheets in polymer matrices. This allows graphene to participate more effectively in composite processing and deliver functions such as reinforcement, electrical conductivity, thermal conductivity, antistatic performance, wear resistance and barrier properties. Compared with directly adding ordinary graphene powder, these products offer more uniform dispersion, lower agglomeration risk, better processing adaptability, easier addition and more controllable performance improvement.

The upstream supply chain mainly includes graphite, graphene oxide, reduced graphene, dispersants, coupling agents, resin carriers and solvents. The midstream segment covers graphene preparation, surface modification, dispersion treatment, masterbatching, slurry preparation and compound formulation. Downstream applications mainly include automotive, electrical and electronic, packaging materials,

industrial products, building materials and other fields. Product value is mainly concentrated in graphene quality control, dispersion and modification technology, compatibility design with polymer matrices, and end-use performance validation capabilities.

United States market for Graphene Additives for Polymer Composites is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
