The global Graphene Battery market size is predicted to grow from US\$ 54.8 million in 2025 to US\$ 186 million in 2031; it is expected to grow at a CAGR of 22.6% from 2025 to 2031.

Graphene is a one-atom-thick sheet of carbon atoms with a relative surface area of 2,630 m²/g, which is superior at storing charges with almost no degradation over long-term cycling. The bonds in graphene give graphene more than four times the tensile strength of steel while being super transparent, flexible, and an excellent conductor of electricity and heat. These properties make graphene a suitable candidate for not only battery but also supercapacitor
