Graphene epoxy zinc-rich primer is a high-performance anti-corrosion coating that combines the excellent properties of graphene and the traditional advantages of epoxy zinc-rich coatings. It is widely used in fields that require strong anti-corrosion protection. Its main ingredients include epoxy resin, zinc powder and graphene. Graphene, as a new type of carbon-based material, can significantly enhance the corrosion resistance, oxidation resistance and wear resistance of the coating by virtue of its excellent mechanical strength, thermal conductivity and electrical conductivity. Epoxy zinc-rich primer contains a large amount of zinc powder, which has self-sacrificial properties and forms a protective film on the metal surface to prevent the substrate from rusting and corrosion.

United States market for Graphene Epoxy Zinc-Rich Primer is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
