The global Graphene-Reinforced Masterbatches market size is predicted to grow from US\$ 61.04 million in 2025 to US\$ 85.03 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Graphene-reinforced masterbatch is a high-concentration functional plastic raw material in which nano-sized graphene is pre-dispersed in a carrier resin (such as PE, PP, TPU, etc.) at high density. It is used in plastics processing to significantly improve the mechanical strength, thermal conductivity, electrical conductivity, aging resistance, and shielding performance of composite materials. Graphene typically has a layered structure, which effectively enhances the comprehensive physical properties of plastic materials, making it an additive for high-performance plastics.

The upstream mainly consists of high-performance graphite powder/film and TPU resin. The core competitiveness lies in the quality of graphene exfoliation and surface modification technology, improving the interfacial affinity between graphene and TPU molecules by adding compatibilizers.

Global sales in 2025 are estimated at approximately 1300 tons, with an average market price of approximately \$48/kg. The industry gross profit margin is around 28%.

United States market for Graphene-Reinforced Masterbatches is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Graphene-Reinforced Masterbatches is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
