Graphene thermal adhesive is a thermally conductive material with high thermal conductivity, and its basic component is graphene. Graphene is a single-layer two-dimensional lattice structure composed of carbon atoms. It has excellent thermal conductivity, electrical conductivity and mechanical strength. It is considered to be one of the best thermal conductive materials currently known. Graphene thermal adhesive is usually composed of graphene sheets, thermally conductive fillers (such as metal particles or oxide particles) and polymer matrix. By combining graphene with thermally conductive fillers and polymer matrices, thermally conductive adhesives with good thermal conductivity and plasticity can be made.

The global Graphene Thermal Adhesive market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
