A graphic dot matrix LCD module is a display device that displays graphics, text, and images by applying an electric field to the liquid crystal material to change its optical properties. The module consists of multiple components, including an LCD, backlight, controller, drive circuit, and interface. The LCD is the core part, which contains a dot matrix (composed of rows and columns), and each intersection is called a pixel. The controller processes the input data and converts it into signals to drive the LCD, while the drive circuit converts these signals into the voltage required by the LCD.
