The global Graphics Chip market size is predicted to grow from US$ 50100 million in 2025 to US$ 109420 million in 2032; it is expected to grow at a CAGR of 12.0% from 2026 to 2032.

Graphics Chip is a specialized electronic circuit designed to rapidly manipulate and alter memory to accelerate the creation of images in a frame buffer intended for output to a display device. It was originally used to process computer graphics (such as games and 3D modeling), but with its powerful parallel computing capabilities, it has now been widely used in scientific computing, artificial intelligence, deep learning and other fields.

The Graphics Chip industry has experienced explosive growth in recent years, mainly benefiting from strong demand in areas such as artificial intelligence (AI), high-performance computing (HPC), gaming and metaverse, and autonomous driving.

Global 5 largest manufacturers of Graphics Chip are Nvidia Corporation, Advanced Micro Devices (AMD), Intel Corporation, ARM Limited and Qualcomm, which make up over 80%. Among them, Nvidia Corporation is the leader with about 40% market share. In terms of product types, Graphics Chip can be divided into two types: Independent Graphics Chip and Integrated Graphics Chip. Independent Graphics Chip occupies the largest share of the total market, more than 95%. In terms of product application, Graphics Chip is mainly used in Games and Entertainment, Data center, Professional visualization and Car. Games and Entertainment occupy the largest share of the total market, about 66%.

Discrete Graphics Chip, with their powerful computing power and independent video memory, remain the core hardware in high-performance computing, gaming, and professional graphics. With the development of AI, the metaverse, and autonomous driving, their market demand will continue to grow.
