The global Graphite for Sintering market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Isostatically pressed graphite is used throughout the pressure sintering industry to produce graphite molds. The material used to make the sintering mold is selected based on the process temperature and pressure requirements. When the electrical and thermal conductivity of the material are the preferred parameters, it is chosen to reduce the production cycle time. However, when the process pressure is too high, the mechanical strength of the mold takes priority.
