The global Graphite Felts market size is predicted to grow from US$ 144 million in 2025 to US$ 275 million in 2031; it is expected to grow at a CAGR of 11.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

This report focus on Graphite Felts market. Graphite Felts (GFs) are widely used due to their electrochemical activity, high permeability for liquids, high surface area and relatively low cost.

Carbon and graphite felts find wide applications due to their properties such as high thermal insulation, broad operational range, chemical stability, and lightweight. APAC was the fastest-growing carbon felt and graphite felt market, in terms of value and volume. The increasing demand for carbon and graphite felts from the emerging economies and rising government spending on infrastructural projects are the main factors contributing to the market growth in APAC. The increasing demand for high-performance batteries and improved performance of carbon fiber in high temperature applications are driving the carbon felt and graphite felt market. The absence of quality control in developing economies is restraining the market growth.
