Graphite furnace atomic absorption spectrophotometer (GFAAS for short) is a high-precision instrument for analyzing metal elements. The graphite furnace atomic absorption spectrophotometer uses graphite furnace technology and absorption spectrophotometry to quantitatively analyze the content of metal elements by measuring the absorption of light of specific wavelengths by metal elements in the sample. The instrument is mainly composed of sample heating system, absorption system, optical system and signal detection system, among which the graphite furnace is the core component, which is used to perform high-temperature treatment on the sample, so that the metal elements in the sample evaporate, atomize and concentrate in the graphite tube for subsequent spectral analysis.

The global Graphite Furnace Atomic Absorption Spectrophotometer market size is projected to grow from US\$ 232 million in 2024 to US\$ 301 million in 2030; it is expected to grow at a CAGR of 4.5% from 2024 to 2030.
