Graphite Face paddles are light and strong, which provide a player with power and control. The graphite face on these pickleball paddles is only a few mm thick and most graphite pickleball paddles weigh between 6-9 ounces. Graphite face pickleball paddles have a light weight, but are stiff which helps spread the energy of a ball strike consistently over a larger area of the paddle. The energy transfer on a graphite face pickleball paddle is great for “dinks” and for driving the ball down the court without too much effort. These features make a graphite face pickleball paddle one of the top

choices for competitive and professional pickleball players.
