The global Graphite Polystyrene Insulation Board (SEPS Board) market size is predicted to grow from US\$ 209 million in 2025 to US\$ 277 million in 2031; it is expected to grow at a CAGR of 4.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Graphite Polystyrene Insulation Board (SEPS Board) is a novel and highly efficient insulation material made from a mixture of polystyrene foam particles and graphite powder, processed through special manufacturing techniques. The addition of graphite significantly enhances the thermal insulation and fire resistance properties of the material, giving it unique advantages in the field of building insulation. SEPS Board features low density, low thermal conductivity, high compressive strength, and good dimensional stability, effectively reducing heat loss in buildings and lowering energy consumption while meeting building fire safety requirements. Additionally, SEPS Board has good weather resistance and durability, maintaining its insulation properties over the long term in various climatic conditions. With increasing global emphasis on building energy efficiency and environmental protection, SEPS Board, as a green building material, is seeing steady market demand growth and becoming an important choice in the field of building insulation.

Market Development Opportunities & Main Driving Factors

The market for Graphite Polystyrene (SEPS) Insulation Board is witnessing rapid development opportunities. Globally, the increasing strictness of building energy

efficiency regulations is driving the demand for high-performance insulation materials. SEPS Insulation Board, with its excellent thermal insulation and fire resistance properties, can effectively reduce building energy consumption and meet energy-saving standards, thus being widely applied in both new construction projects and retrofitting of existing buildings. Meanwhile, as environmental awareness grows, the demand for green building materials is also on the rise. SEPS Insulation Board, as an environmentally friendly insulation material with low energy consumption and minimal environmental impact during production, aligns with the requirements for sustainable development. Additionally, the relatively low production cost of SEPS Insulation Board gives it a strong cost-performance ratio, providing an economically efficient insulation solution for construction projects. In emerging market countries, the acceleration of urbanization and the advancement of infrastructure construction offer broad development space for the SEPS Insulation Board market.

Market Challenges, Risks, & Restraints

Despite its promising market prospects, the Graphite Polystyrene (SEPS) Insulation Board market also faces several challenges and risks. Firstly, the market competition is fierce, with various insulation materials such as rock wool and glass wool available, which compete with SEPS Insulation Board in certain application scenarios. Companies need to continuously improve product quality and performance to highlight the advantages of SEPS Insulation Board. Secondly, fluctuations in raw material prices can impact the production cost of SEPS Insulation Board. The instability of raw material prices such as polystyrene and graphite may lead to increased production costs, thereby compressing corporate profit margins. Additionally, the market recognition of SEPS Insulation Board is relatively low, with some builders and consumers having insufficient understanding of its performance and benefits, which may affect its market promotion. Lastly, changes in international trade policies, such as trade barriers and tariff adjustments, may have adverse effects on the export market of SEPS Insulation Board, especially for companies that rely on exports.

Downstream Demand Trends

Looking at downstream demand, the demand for Graphite Polystyrene (SEPS) Insulation Board in the construction field is continuously growing. In residential buildings, as people's requirements for living comfort and energy-saving effects increase, SEPS Insulation Board is widely used in external wall insulation, roof insulation, and ground insulation to enhance the thermal insulation performance and energy-saving effects of buildings. In commercial and public buildings, such as

shopping centers, hospitals, and schools, SEPS Insulation Board is also favored for its high thermal insulation and fire resistance properties. Moreover, with the development of green buildings and prefabricated construction, SEPS Insulation Board, as a prefabricated and standardized insulation material, can be integrated with modern construction techniques to improve construction efficiency and quality. In the future, as building energy efficiency standards are further raised and environmental protection requirements are strengthened, the market share of SEPS Insulation Board in the building insulation field is expected to expand further, and its application scope will extend from traditional building insulation to industrial insulation and other fields.
