It is equipped with a high-strength hydraulic shear blade and a grapple clamping mechanism, which can complete the cutting and handling of trees in one go. The equipment is driven by a hydraulic system, flexible and efficient in operation, and is suitable for a variety of tree diameters and different working environments. While reducing manual intervention, the grapple tree shear can also significantly improve the efficiency of tasks such as forest thinning, commercial timber harvesting, and clearing windfalls. It is an indispensable tool in modern forestry. Its design fully considers the protection of the surrounding environment and helps to achieve efficient and sustainable forest management.
