The pasture dryer is a kind of dryer. It uses coal as fuel and generates strong dry hot air through a high temperature furnace, so that the material is in direct contact with the hot air in the drying cylinder, and moves forward in a spiral shape to achieve the purpose of drying.

The breeding economy has gradually formed new models and industrial chain forms. For grass dryer manufacturers, it is necessary to adjust their strategic market. The centralized recycling of grass and cow dung formed by base breeding and retail breeding can be both an opportunity and a market harvest. Narrow, the changes in the capacity requirements of forage dryers will be more prominent.
