The global Grating Scale Displacement Sensor market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The grating ruler displacement sensor is a measurement feedback device that uses the optical principle of the grating to work. Grating ruler displacement sensor is often used in the closed-loop servo system of CNC machine tools, and can be used for the detection of linear displacement or angular displacement. The measurement output signal is a digital pulse, which has the characteristics of large detection range, high detection accuracy and fast response speed.

According to the survey and statistics of the company's 'Semiconductor Research Center', the global sales of semiconductor manufacturing equipment will reach US$109 billion in 2022, reaching a record high, an increase of 5.6% from US$103.2 billion in 2021. In recent years, the development process of the semiconductor industry has been further accelerated, and the performance of the semiconductor equipment segment is more flexible than the overall industry, and the development prospects are good.
