## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The gravity foundation is one of the main foundation types in the offshore wind turbine supporting structure. It has a simple structure and mature application. It works similarly to the common extended foundation of onshore wind turbines. It mainly relies on the foundation and ballast weight to resist the upper wind turbine load and the external environment. The overturning moment and sliding force generated by the load keep the foundation and wind turbine tower structure stable.
