Gravity conveyor is an unpowered conveyor such as a gravity chute or a roller conveyor that uses the force of gravity to move materials over a downward path.

Gravity Conveyors are material handling systems that use the force of gravity to move items along a predetermined path. These conveyors do not require external power sources or motors; instead, they rely on an inclined surface or rollers to facilitate the movement of objects from higher to lower points, making them suitable for handling lightweight items and creating efficient flow in manufacturing and distribution processes.
