A Gravity Destoner is an industrial machine used to separate stones, glass, and other heavy impurities from grains, seeds, pulses, or similar granular materials based on differences in specific gravity. It works by combining air suction and vibration to stratify the materials: the heavier contaminants sink to the bottom and move in one direction, while the lighter, clean product flows in the opposite direction. This separation is crucial in industries such as grain milling, food processing, and seed cleaning to ensure product quality and protect downstream equipment.

Modern gravity destoners are equipped with adjustable airflows, deck inclination, and vibration frequency to optimize separation efficiency for different material types and sizes. Some models include sensors and dust collection systems to enhance performance and environmental safety. They are especially vital in cleaning operations prior to packaging or further processing, helping prevent machinery wear and consumer complaints caused by foreign matter.
