Gravity Ridge Ventilators are typically devices used in roofing systems to provide passive ventilation. They are designed to take advantage of the natural buoyancy of warm air, allowing it to escape through the ridge of a roof while drawing in cooler air from the eaves or soffits. This natural ventilation process helps regulate temperature and moisture levels in attics or upper building spaces without the need for mechanical fans or power.

The global Gravity Ridge Ventilators market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
