The research report highlights the growth potential of the global Gray Cardboard market. Gray Cardboard are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Gray Cardboard. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Gray Cardboard market.

Grey cardboard is a very economical material, made from recycled paper and has a smooth surface.

Due to the limited foreign waste quota, small and medium-sized paper mills mainly rely on high-priced national waste for production, and the small and medium-sized paper mills lack the bargaining power in the finished paper market, so they mostly adopt fast-in and fast-out, cash is king, and their inventories are relatively low. Affected by fluctuations in market raw material prices and price adjustments for finished products of large paper mills, profit margins were squeezed. For small and medium-sized paper mills, the price of national waste is an important reason to limit the price adjustment of their finished paper.
