Gray Iron, or grey cast iron, is a type of cast iron that has a graphitic microstructure. Casting is a process in which a liquid metal is somehow delivered into a mold that contains a hollow cavity of the intended shape. The metal and mold are then cooled, and the metal part (the casting) is extracted. Casting is most often used for making complex shapes that would be difficult or uneconomical to make by other methods.

Asia Pacific was the leading regional gray iron casting market with the revenue market share about 68% in 2019, China was a major producer and consumer in the region. The follower are Europe and America, they occupied about 25% revenue market share.
