Gray iron pipe is made of hot or cold-drawn gray cast iron. It has sufficient strength and corrosion resistance and has a wide range of applications. According to their different production methods, gray iron pipes can be divided into gray cast iron pipes and cold-drawn gray iron pipes. Gray cast iron pipes have been widely used in water supply systems due to their strong corrosion resistance and long service life, but they have been gradually replaced by other pipes due to their brittle material and thick pipe walls. Cold-painted gray iron pipes have excellent corrosion resistance, can adapt to a variety of environments, and have a wider range of applications.
