The global Grazing Incidence X-Ray Diffractometer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Grazing Incidence X-Ray Diffractometer (GIXRD) is a specialized X-ray diffraction technique used for studying surface and thin film materials. It works by using a low-angle incident X-ray beam, causing most of the X-rays to be reflected by the sample surface while only a small portion penetrates the sample and undergoes diffraction. By analyzing the diffraction signal, information about the surface structure, crystal orientation, stress state, and other properties of the sample can be obtained.
