The global Grease-Based Thermal Interface Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Grease-based TIMs have a low viscosity, high thermal conductivity, and are an ideal choice for applications where space is limited. This type of TIM is also suitable for instances where controlling thickness and distribution is important. They do not require a cure cycle and are often used in heat sinks and electronic assembly applications. While very conformable, grease-based TIMs require drying time, which may limit the operator's ability to maintain this type of thermal management material over time.

United States market for Grease-Based Thermal Interface Materials is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Grease-Based Thermal Interface Materials is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
