Green diesel usually refers to biodiesel, also known as biofuel diesel. This diesel is a renewable fuel typically produced from biomass feedstocks such as vegetable oils, animal oils or waste cooking oils. Biodiesel has lower carbon emissions than conventional petroleum diesel because it is derived from renewable resources. The production process of biodiesel usually involves chemical reactions such as esterification or conversion of biomass raw materials into methyl ester to obtain a product similar to traditional diesel. It can be used in conventional diesel engines and requires no additional modifications.

The global Green Diesel market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
