The global Green Laser market size is predicted to grow from US$ 335 million in 2025 to US$ 996 million in 2031; it is expected to grow at a CAGR of 19.9% from 2025 to 2031.

Green Laser is a laser device that emits a green laser beam. It uses a laser diode or laser crystal to generate green light, which is focused and amplified by an optical system to form a visible green laser beam. Green lasers typically come in the form of handheld or tabletop devices.

According to the research and statistics of the company's 'Laser Research Center', the global laser market size in 2022 will be about 22 billion US dollars, which is almost the same as the market size of the previous year. At present, the production and technology of lasers are mainly controlled by manufacturers in China, the United States, Germany and Japan. At present, the production and technology of lasers are constantly improving and developing. Improvements in manufacturing technology have made the laser production process more efficient, precise and reliable. The output power of lasers continues to increase, the beam quality continues to improve, and the size is getting smaller and smaller for portability and use. At the same time, concerns about the safety and compliance of lasers are increasing, and manufacturers need to comply with relevant standards and regulations. The application range of lasers is also expanding, covering industrial, medical, communication and emerging fields such as lidar and autonomous driving.
