The global Green Membrane-based Sugar Production market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Green Membrane-based Sugar Production is a method that uses modern membrane separation technology to transform the traditional sugar production process. This technology achieves impurity removal, clarification, decolorization and concentration of sugarcane mixed juice through the precise physical screening of separation membranes. Compared with the traditional sugar cane sugar production process, Green Membrane-based Sugar Production has many advantages.

Green Membrane-based Sugar Production does not add harmful substances, greatly reducing the use of chemicals, thereby improving product safety. Secondly, the cleaning process of Green Membrane-based Sugar Production is efficient and stable, which can improve sugar production efficiency and the quality of finished sugar. In addition, the by-products of Green Membrane-based Sugar Production can be comprehensively utilized, the products are diversified, and automated production can be achieved.
