Green refrigerants are the refrigerants which have lower global warming potential and ozone depleting properties as compared to the synthetic refrigerants, which possess a major threat to the ozone layer. The collaborative efforts by countries worldwide is contributing in the process of suppressing the consumption of the widely used group of synthetic refrigerants such as Chlorofluorocarbons (CFCs) and Hydrochlorofluorocarbons (HCFCs), which resulted in depletion of the ozone layer and brought climatic changes due to global warming.
