## Abstracts

The global Greenhouse Suspended Self-Propelled Sprinkler market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The greenhouse suspended self-propelled sprinkler is a modern irrigation equipment used in greenhouse agriculture, which can automatically perform sprinkler irrigation in the greenhouse. The equipment is usually hung on the top of the greenhouse through a track or guide system, moves along a fixed path, and sprays an appropriate amount of water and nutrient solution to the crops at the same time to meet the growth needs of the crops. With the advancement of technology, sprinkler irrigation technology may become more precise. It can adjust the amount of water sprayed and the frequency of spraying according to the needs and growth status of crops, reduce waste and improve irrigation efficiency.
