This report focus on grenade launchers market. A grenade launcher is a weapon that fires a specially-designed large-caliber projectile, often with an explosive, smoke or gas warhead.

Grenade launchers are a form of portable firepower available to infantry units, allowing them augment the basic assault rifle. Unlike the RPG, the grenade launcher uses an High-Low propulsion launching system to reduce the recoil and are effective in the 400 meters range. These can be a stand alone system like the M79 or be an multi-launcher, like the MGL, or even the most popular form, the underslung single-grenade launcher. The most used and famous of the assault rifle underslung grenade launchers is the M203 40x46mm. Some armored fighting vehicles also mount fixed arrays of short range, single-shot grenade launchers as a means of defense.

According to the 2022 global military expenditure statistics report released by the SIPRI, global military spending in 2022 maintained growth for the eighth consecutive year, an increase of 3.7% compared with 2021, reaching \$2.24 trillion. The United States had the largest military expenditure in the world, with a size of \$877 billion, accounting for 39% of the world's total military expenditure. China and Russia were second and third, respectively. Ukraine's defense spending increased by 640% in 2022, making it the 11th largest defense spender in the world. The UK had the highest defence spending in

Central and Western Europe at \$68.5 billion. France, South Korea and Japan also rank among the world's top 10 defense spenders.
