According to our LPI (LP Information) latest study, the global Grid-connected Microgrid market size was valued at US\$ 14950 million in 2023. With growing demand in downstream market, the Grid-connected Microgrid is forecast to a readjusted size of US\$ 38380 million by 2030 with a CAGR of 14.4% during review period.

The research report highlights the growth potential of the global Grid-connected Microgrid market. Grid-connected Microgrid are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Grid-connected Microgrid. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Grid-connected Microgrid market.

The grid-connected microgrid includes multiple generators, power distribution systems, and complex controls. The main grid acts as the main power source for the grid-connected microgrid. These microgrids rely on the main grid for power balance and energy backup. Grid-connected microgrids generally have higher reliability than remote / island microgrids due to their connection to the main grid. The growth of the grid-connected microgrid market can be attributed to the expansion of utility-based grid networks and the large-scale use of renewable energy sources (such as offshore wind energy). Grid-connected microgrids can provide grid flexibility and improve quality. Their impact on the environment is small, thus driving demand for clean energy.
