The global Grifola Frondosa (GF) market size is predicted to grow from US\$ 506 million in 2025 to US\$ 685 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

In 2025, global Grifola Frondosa (Maitake) production reached approximately 103 k tons, with an average global market price of around US\$5,022 per ton. Grifola frondosa (also known as hen-of-the-woods, maitake (dancing mushroom) in Japanese, ram's head or sheep's head) is a polypore mushroom that grows at the base of trees, particularly old growth oaks or maples. It is typically found in late summer to early autumn. It is native to China, Europe, and North America.

The global market for Grifola frondosa shows strong regional concentration and a layered supply structure. The supply side is highly concentrated in Japan and China, which together account for the vast majority of global production. Japan is characterized by factory-based and standardized production, with output remaining above 55,000 tons in recent years, representing more than half of the global market. The industry also shows high concentration, with leading players such as Yukiguni Maitake and Hokuto Corporation holding strong advantages in scale and distribution channels. In contrast, China relies on regional production clusters, with output peaking at 48,700 tons in 2022 and remaining below 40,000 tons over the past three years. The industry is characterized by clustered production with relatively large overall scale but lower concentration. Outside these core regions, production in Europe, the United States, and other regions is limited, totaling less than 10,000 tons, mainly serving as a supplement for high-end fresh products and dried product distribution. On the demand side, fresh products dominate, while dried products play a supplementary role with a smaller share. Overall market size remains modest, but price levels are higher than common edible

mushrooms due to relatively complex cultivation requirements, longer production cycles, and niche consumption scenarios. Trade flows are limited, with strong localization in supply and distribution. Future growth is expected to be driven by premium food consumption and specialty agriculture demand, though expansion may remain moderate due to limited consumer awareness and scaling challenges.
