The global Grinding Machine With Moving Table market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Grinding machine with moving table is a common grinding machine used in precision machining. It consists of a machine tool, electrical control system, automatic feed system, and other components. This device uses a moving worktable to move the workpiece on the cutter and thus achieve grinding.

Moving table surface grinders can be classified into manual and automatic types. Manual moving table surface grinders require operators to manually control the movement of the worktable for grinding. Automatic moving table surface grinders, on the other hand, can achieve automated control which improves production efficiency and machining accuracy to some extent.

Moving table surface grinders are commonly used for precision grinding of parts, especially those with high requirements for shape and size, such as automobile engine cylinder heads, hubs, guides, and molds.
