Grit washer is a mechanical equipment used in wastewater treatment plants to remove and separate grit particles from the wastewater. It typically consists of a chamber or tank where the grit-laden wastewater is introduced. The grit settles to the bottom due to its high density while the cleaner water remains on top. The settled grit is then washed to remove organic material and lighter particles, ensuring that only clean grit is collected and discharged. The clean grit can be further processed or disposed of properly, while the treated wastewater continues to the next stage of treatment.
