The global Ground Omnidirectional Antennas market size is predicted to grow from US\$ 959 million in 2025 to US\$ 1552 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

In 2025, global Ground Omnidirectional Antennas production reached approximately 30.63 million units, with an average global market price of around US\$32 per unit.

The gross profit margin of major companies in the industry is between 35%–55%.

In 2025, the global production capacity of ground omnidirectional antennas was approximately 40.84 million units.

Ground Omnidirectional Antennas are radio frequency antennas designed to transmit and receive signals uniformly in all horizontal directions. Installed on ground-based infrastructure, these antennas provide stable 360-degree coverage and are widely used in wireless communication, public safety networks, transportation systems, and industrial connectivity applications.

The industrial chain of Ground Omnidirectional Antennas includes upstream materials such as metal radiators, dielectric materials, cables, connectors, and protective housings. The midstream focuses on antenna design, impedance matching, tuning, and assembly. Downstream applications cover base stations, private wireless networks, IoT gateways, transportation communication systems, and outdoor communication facilities, supported by installation and maintenance services.

The ground omnidirectional antenna market is supported by steady expansion of

wireless communication infrastructure and increasing deployment of IoT and private network systems. Demand for reliable, wide-area signal coverage in transportation, industrial, and public safety applications drives adoption. Technological improvements in materials, weather resistance, and multi-band support enhance antenna performance and service life. Overall, the market is expected to grow steadily as wireless connectivity continues to expand across diverse outdoor and industrial environments.
