Ground Penetrating Radar for Concrete is a non-destructive testing method used to assess and inspect concrete structures. By emitting high-frequency electromagnetic waves into the concrete, GPR detects changes in the material's dielectric properties, which allows it to locate embedded objects such as rebar, conduits, voids, and cracks. This technology is commonly used in construction and civil engineering to ensure the integrity of concrete without causing any damage. GPR provides real-time imaging, enabling accurate analysis and mapping of subsurface conditions within the concrete.
