Ground Resistance Digital Clamp Meter is a measuring instrument specially used for measuring ground resistance. It adopts clamp design and can digitally display ground resistance value. It is based on electromagnetic induction. By clamping the ground wire or ground body under test, the current transformer is used to detect the current flowing through, and the ground resistance value is calculated by combining the internal circuit of the instrument. It is safe and reliable, with data storage and alarm functions, and is widely used in ground resistance measurement of power, communication, and industrial electrical equipment.
