Grounding bars and rods are components of grounding systems used in industrial, commercial, and residential building or infrastructure. Grounding bars are metal brackets made of conductive materials, such as copper and galvanized steel, which serve as a central grounding point for equipment. These bars and rods provide a conducive path for electricity to flow through them. Grounding rods are the end point of grounding systems. The conductivity and service life of products depend on the thickness of the coating. Typically, the length of the rod is 8' and the thickness of the rod is from 3/8" to 1".

The growth in the construction industry in APAC is one of the primary growth factors for this market. Grounding bars and rods are the safety equipment that are necessary in

the construction industry to protect the equipment and personnel from damage. Improvements in living standards has resulted in an increase in the demand for construction industry. The increase in constructions in the residential, commercial, and industrial sectors will increase the demand for grounding bars and rods. Innovations in building design and the increased focus on energy efficient solutions for buildings have increased the opportunities for vendors to strengthen their presence in the grounding bars and rods market.
