A groundwater stratification sampler is a specialized device used to collect groundwater samples at different depths. It typically consists of a sampling tube, valve system, filtration device, and sample storage bottle, allowing for the acquisition of representative samples without disturbing the water flow. It solves the problems of distinguishing water quality between different aquifers and locating pollution sources, providing accurate data for environmental assessments and water resource management. The average price of this product is approximately US\$1770 per unit, with global sales of approximately 201,700 units. The groundwater stratification sampler market is experiencing rapid growth, driven by environmental protection, agricultural irrigation, and water resource security. Future opportunities lie in intelligent and automated sampling systems, where companies can expand their market share by increasing single-line capacity and reducing costs.
