The global Groundwater Passive Sampler market size is predicted to grow from US\$ 263 million in 2025 to US\$ 374 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Passive groundwater samplers are devices used for long-term deployment in groundwater monitoring wells to collect water samples through natural seepage or diffusion processes. Unlike active pump sampling, they require no external power and rely on diffusion membranes or adsorbent materials to collect representative samples within a set time. They solve the problems of traditional pump sampling, such as disturbing the aquifer, sample instability, and high cost, providing a low-cost, low-maintenance, long-term monitoring solution. The passive groundwater sampler market is growing rapidly, driven by environmental regulations, agricultural water quality monitoring, and mining and oil and gas pollution control. Future opportunities lie in intelligent and automated sampling systems. The average price of this product is approximately US\$1290 per unit, with global sales of approximately 208,000 units.

United States market for Groundwater Passive Sampler is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Groundwater Passive Sampler is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Groundwater Passive Sampler is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
