The global Group B Streptococcus Culture Medium market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Group B Streptococcus (GBS), also known as Streptococcus agalactiae, is a gram-positive coccus and is the primary pathogenic bacteria causing invasive infections such as neonatal sepsis and meningitis. The bacterial culture identification method of anorectal/vaginal secretions is the traditional method for GBS screening. The ?Guidelines for the Prevention of Peripartum Group B Streptococcus Disease? promulgated by the US CDC in 2010 and the 2015 European Consensus both consider selective broth enrichment. Culture identification is the preferred standard method. Bacterial culture takes a long time, and inspectors need a certain period of technical training, which limits the routine development of some clinical laboratories. With the development of biotechnology in recent years, many new detection methods have emerged that are easy to operate, highly sensitive, short in detection time, easy to judge the results, or capable of automated interpretation.

United States market for Group B Streptococcus Culture Medium is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Group B Streptococcus Culture Medium is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
