Grouting defect detectors are specialized nondestructive testing devices used to identify and assess quality defects such as voids, cracks, underfill, and debonding in grouting projects. They are widely used in prestressed bridge ducts, behind tunnel linings, and in pile foundations and ground reinforcement. These instruments, typically based on principles such as ultrasound, acoustic transmission, radar imaging, or pressure sensing, can quickly and accurately locate abnormal areas during the grouting process, providing a reliable basis for project quality assessment and subsequent repairs. They are a crucial technical tool for ensuring structural safety and construction quality.Sales in 2024 will be 229,000 units, with an average price of US$680 per unit.The single-line production capacity of this product is about 50,000 units.
