GRP Railway Fencing refers to the use of Glass Reinforced Plastic (GRP) for fencing along railway tracks and related infrastructure. This material is chosen for its high strength, durability, and resistance to corrosion, making it ideal for harsh outdoor environments. GRP fencing is lightweight yet robust, offering a long-lasting solution that requires minimal maintenance. It is also non-conductive, enhancing safety around electrified railway lines. The use of GRP for railway fencing helps ensure the protection of railway assets and enhances the safety of both rail operations and the public.

The global GRP Railway Fencing market size is projected to grow from US\$ 329 million in 2024 to US\$ 415 million in 2030; it is expected to grow at a CAGR of 3.9% from 2024 to 2030.
