The global GSM Scales market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

GSM stands for grams per square meter, and is a standard measurement for fabric weight. The cutter allows us to cut out a perfect circle with an area of 100 cm, and the scale precisely measures the weight of the little fabric circle. We can then multiply that number by 100 to get the GSM of the fabric.

The market prospect for GSM scales is positive due to the continuous demand from existing industries and potential growth in emerging sectors. As industries evolve and new products are developed, there is an ongoing need for accurate measurements of material weight per unit area. The increasing adoption of automated manufacturing processes, advancements in material science, and stricter quality control requirements are expected to further fuel the market prospect for GSM scales.
