The global GTP Pick Station market size is predicted to grow from US\$ 2108 million in 2025 to US\$ 4171 million in 2032; it is expected to grow at a CAGR of 11.0% from 2026 to 2032.

A Goods-to-Person Pick Station is a system that automatically provides stock and collection containers to workers. The operator simply follows the instructions on the display and picks the required quantity from the stock containers provided to the collecting container. This ease of operation makes the system less prone to variations in productivity due to the skill level of the operator. Compared with cart picking, there is no need to walk around to find shelves, which improves work efficiency and reduces the physical burden of workers.

GTP Pick Stations are manual or semi-automated workstations within automated warehouse picking systems. Their core logic isn't about people going to storage locations, but rather about shuttles, tote robots, AutoStore, AMRs, stacker cranes, or conveyor systems automatically delivering totes, pallets, or goods to the workstation, where operators perform picking, verification, replenishment, or sorting.

Honeywell defines GTP systems as solutions consisting of customized, ergonomic workstations and user-friendly control systems designed to significantly improve order picker efficiencies. Swisslog explicitly states that goods-to-person picking is part of a semi-automated internal logistics system, where automated warehouses, shuttle systems, AutoStore, or CarryPick deliver totes to fixed workstations located at the warehouse edge. KNAPP's Pick-it-Easy series further emphasizes that the workstation is the interface between 'people' and 'warehousing technology,' aiming to integrate efficiency, quality, and ergonomics into a single work unit. GTP Pick Station is not a

single device, but a system-level node consisting of a workbench, display and indication system, barcode scanning and weighing unit, software control interface, and conveyor or robot interface connected to the upstream automated storage system.
